

1. My Python code:

```

1 # Hsuan-You Lin Module 10 Problem Set Question 1.
2 def counting_Sort(arr):
3     # creat the hashmap for array and count the elements
4     HashMap = dict()
5     output = [None] * len(arr)
6     for i in range(len(arr)):
7         num = arr[i]
8         # if any element repeats itself,
9         # simply increase its count
10        if num not in HashMap:
11            HashMap[num] = 0
12            HashMap[num] += 1
13
14        # sorted the hashmap by keys
15        HashMap = dict(sorted(HashMap.items(), key = lambda item: item[0]))
16        sorted_num = list(HashMap.keys())
17
18        # cumulative count
19        for i in range(1, len(sorted_num)):
20            HashMap[sorted_num[i]] += HashMap[sorted_num[i - 1]]
21
22        # Build the output array
23        for num in arr:
24            output[HashMap[num] - 1] = num
25            HashMap[num] -= 1
26
27        # Copy the output array to arr,
28        # so that arr now contains sorted characters
29        for i in range(0, len(arr)):
30            arr[i] = output[i]
31        return arr
32
33 if __name__ == "__main__":
34     arr = [4, 2, 2, 8, 3, 3, 1]
35     print("Before sorted array is: ", arr)
36     ans = counting_Sort(arr)
37     print("After counting sorted array is: ", ans)
38

```

```

Module10 — -bash — 80x24
(base) pisces:Module10$ python Q1.py
Before sorted array is: [4, 2, 2, 8, 3, 3, 1]
After counting sorted array is: [1, 2, 2, 3, 3, 4, 8]
(base) pisces:Module10$

```

2. My Answer:

ai al co fo go is no of pa pe th th th ti to to
My steps:

Data	D=1	D=0
no	pa	ai
is	pe	al
th	of	co
ti	th	fo
fo	th	go
al	th	is
go	ti	no
pe	ai	of
to	al	pa
co	no	pe
to	fo	th
th	go	th
ai	to	th
of	co	ti
th	to	to
pa	is	to

3. My Answer:

First, get the maximum length in the list, and do the radix sort, if index d is empty in the string, then put it to the front of the list, make sure the shortest string always in front of the list.

example:

sort the following strings: "tho", "th", "the".

Data	D=2	D=1	D=0
tho	th	th	th
th	the	the	the
the	tho	tho	tho

4. My Answer:

5. My Answer:

6. My Answer:

7. My Answer:

8. My Answer:

input data	state		input data	state
	0			0
A	1		A	1
B	2		B	2
C	0		C	0
A	1		A	1
A	1		A	1
A	1		A	1
B	2	=>	B	2
A	3		A	3
B	4		A	1
A	5		B	2
B	4		A	3
A	5		C	0
C	6	←end state	A	1
A	none		A	1
A	none		B	2
B	none		B	0
B	none		A	1
